Situation report — Trishuli 2026 — Rasuwa, Dhading, Nuwakot

*As of satellite images up to **6 Oct 2026** (first after the event: 27 Aug 2026) · event 26 Aug 2026 (10 Bhadra 2083 BS) · generated 2026-10-14 11:37 UTC · infrastructure status has not been checked on the ground.*

Key figures

	Likely	Up to (incl. possible)
Flood / debris extent	**72.1 km²**	153.1 km²
Buildings in the flood extent	**3,958** of 316,712 mapped	10,229
Motorable roads likely impassable	**126 km** of 7,815 km	312 km
Footpaths and trails affected	46.3 km of 4,765 km	148 km
Bridges with damage evidence: motorable · foot	**60** of 307 · **68** of 361	101 · 180
Health facilities in the flood extent	**3** of 139	3
Buildings without road access (outside the flood extent)	**10,788** in 58 settlements	12,708 in 63 settlements
Buildings with no road or trail connection	4,415	5,379

Affected settlements

- **Buildings within the extent:** Outlying buildings near Nawākot (नुवाकोट) (411), Betrawati (बेत्रावती) (306), Bhainse (भैंसे) (290), Naubisephat (नौविसे फाँट) (245).
- **Road repair candidates:** #1 8.8 km incl. a bridge on NH42, 29A003 near Khangjim (खाङजिम) → reconnects 2,993 buildings (17 named settlements). #2 146 m on 23DR001 near Helambu (हेलम्बु) → reconnects 1,455 buildings (1 named settlement). #3 8.3 km incl. a bridge on NH42 near Mailung (मैलुङ) → reconnects 1,009 buildings (9 named settlements).
- **Health facilities:** in the flood extent: Shaid Memorial Pharmacy, Sahid Memorial Hospital, shaid memorial hospital; cut off: Jagat Health Unit, Health post (स्वास्थ्य चौकी).
- **32 settlements** still reach a local town or health facility but lost the main road out of the area (e.g. Betrawati (बेत्रावती), Sano Bharkhu (ठुलो भार्खु), Gajuri (गजुरी)).

Priority: settlements without road access (top 10 by buildings)

#	Settlement (area)	Buildings without road (+ in extent)	Access now	Walk from the road	Evidence
1	Gatlang (Aamachhodingmo-03)	796 (0)	no road/trail	—	strong
2	Outlying buildings near Ratmate (Belkotgadhi-07)	515 (88)	no road/trail	—	possible
3	Suryamati (Likhu-01)	501 (0)	on foot	1.6 km ≈ 0.5 h (Suryamati)	strong
4	Dandagaun (Uttargaya-02)	427 (5)	on foot	12.3 km ≈ 6.5 h (Kaule Village)	strong
5	Outlying buildings near Ichok (Helambu-06)	410 (0)	on foot	4.5 km ≈ 1.5 h (Ichok)	strong
6	Dongdhing (Helambu-01)	317 (0)	on foot	9.4 km ≈ 3.5 h (Ichok)	strong
7	Outlying buildings near Nawākot (Bidur-02)	284 (411)	on foot	2.0 km ≈ 0.5 h (Batār Bāzār)	strong
8	Goljung (Aamachhodingmo-04)	277 (0)	no road/trail	—	strong
9	Ichok (Helambu-06)	266 (0)	on foot	5.6 km ≈ 2 h (Ichok)	strong
10	Chilime (Aamachhodingmo-05)	251 (0)	no road/trail	—	strong

Infrastructure exposure

- Buildings: **3,958 likely** in the flood/debris extent, 6,271 possibly, 0 not observable, of 316,712 mapped (exposure, not verified damage).
- Motorable roads likely impassable by class: highways / primary 29.3 of 241 km; secondary / tertiary 4.5 of 866 km; local roads 61.4 of 4,905 km; tracks 30.6 of 1,803 km.
- Bridges (counted per OSM bridge way, judged by their approaches): motorable 60 likely + 41 possibly of 307; foot / suspension 68 likely + 112 possibly of 361.
- Health facilities (139 in the area): 3 in the flood extent, 2 cut off by road (+0 possibly); cut off: Jagat Health Unit, Health post (स्वास्थ्य चौकी).

Road-access calculation

- A settlement is cut off when it has no road route from the settlement to any town or hospital, or to a main road leaving the analysed network (network analysed to 15 km beyond the area; outside the area roads are assumed open): 350 hospitals, 30 towns, 831 main-road exits; a motorable road must be within 500 m for a settlement to count as road-served.
- Named settlements without road access (the settlement itself, or most of its buildings outside the flood extent): **58** (strong evidence), 0 possibly, 5 if bridges with flow under the span also failed; 61 more partly; 21 with a long detour; 166 had no road before the event (2,305 buildings there also lost their trail connection).
- Buildings in the flood extent (3,815) are counted separately from buildings without road access.
- Not listed by name: 787 unnamed OSM place points (their buildings count with the nearest named settlement); 2,880 outlying buildings without road access; 44 places across the national border (not assessed).

Observations and uncertainty

- Radar change, optical change and water predictions are restricted to low ground near rivers. Mountain detections must connect to a river channel, whereas weaker change and water predictions with less support are assigned to the possible class. Over 4.6 km² of cloud-covered valley ground, the likely extent is obtained by including ground below the flood level estimated along the river. These areas are marked inferred in the map and are excluded when assessing strong evidence of a road break.
- Road segments are at most 50 m long. A segment is classified as likely impassable when at least half of it, or a continuous 50 m length, lies within the likely flood extent. Strong road-break evidence requires optical change persisting in later images, radar change on two orbits, or overlapping radar and optical change. The radar water model uses the same images as radar change and is counted with that radar evidence.
- The most recent images are from 6 Oct 2026. Cloud and radar shadow prevent observation of 53.4 km², and repairs or new damage after this date cannot be assessed. Buildings and roads absent from pre-event OpenStreetMap are omitted. Road status is calculated from overlap with the extent; bridges are assessed from their approaches.

S1: asc085 (pre 4 dates 07-11–08-16, post 08-28, 09-09); des019 (pre 4 dates 07-19–08-24, post 09-05, 09-17); des121 (pre 4 dates 07-14–08-19, post 08-31, 09-12) · S2: pre 07-23, 07-28, 08-07, 08-11, 08-12; first clear after 08-27; after 08-27, 09-21, 10-01, 10-06 · OSM: geofabrik 260801 (https://download.geofabrik.de/asia/nepal-260801.osm.pbf) (road network +15 km) · Water models: used · Map polygons under 0.2 ha not drawn.
